

Filtering

Content Filtering that gives you control in and out of the classroom

Today's filters need to provide safe, fast access to valuable educational resources and connections whilst effectively preventing access to inappropriate content.

Schools Broadband provides DfE compliant web filtering based on a comprehensive education-specific database that gives your school fully customisable policies. The user friendly interface integrates with both Windows Active Directory and Mac Open Directory giving you the freedom to tailor internet access by user, IP address, group, organisational unit or domain and you can expand or contract internet access for specific periods.

The comprehensive and accurate URL database, which subscribes to the Internet Watch Foundation (IWF), updates daily and has more than one billion entries grouped into education specific categories, so you can be assured of the safe search of both websites and images. If you wish to block certain pages or restrict the download of a particular type of file this can be applied quickly and easily.

Reporting

We allow you to view up to 3 months' worth of historical internet usage and our own back-up system will extend this to 12 months. This information can then be presented to the authorities or the police if required.

Effective Mobile Filtering

Web filtering for mobile devices on or off school premises.

Schools Broadband mobile filtering allows you to extend your existing filtering policies to your off-network devices. This includes Apple devices, netbooks, MacBooks, laptops, Windows 8 tablets and Android devices, ensuring that your students remain safe around the clock – wherever they are. The Mobile Filter will offer you exactly the same level of protection and reporting that you receive for your on-site devices, transparently communicating Internet browser requests from a mobile device to the cloud-based filtering system. This system references the URL requests with its content database and policy settings and either allows or blocks the request.

Mobile Device Management that's made just for schools

Mobile devices, blended learning and 1:1 programmes are fast becoming the norm in schools, giving students access to anytime-anywhere learning opportunities.

Designed just for schools, Schools Broadband's Mobile Device Management makes it easy to manage all iOS, Mac OS, Android and Windows devices distributed around your school.

- Delegate multiple levels of administration
- Set policies at school, classroom, group and device level
- Centralised management of device inventory, reporting, updates and installs
- Remote configuration, lock, and device wiping
- Integration with the Apple Volume Purchasing Plan
- Application deployment and device lockdown – can be managed by both teachers and IT
- A central, easy to use cloud interface
- Ability to force authentication
- Restrictions on device and app use
- Time-based policies
