

My School Phone

Improve your operational efficiency and save money

My School Phone is a complete telephony service for schools and MATs. It is packed with clever features for both individual phones and phone networks and provides a comprehensive range of facilities that will help to improve operational efficiency in your school.

Easy to use and simple to configure, My School Phone feels just like using a traditional phone; its point of difference being the fact it can save you money and uses incredibly advanced technology, that allows you to operate in new ways.

Packed with features

Linking landlines to mobiles, voicemail to email and with free UK landline and mobile calls, My School Phone provides a myriad of further benefits for schools and Multi Academy Trusts. See over for full list.

No matter how often your school changes or grows, My School Phone can change with you: change or add new users, add extra phones to the network, or update your system preferences. You have complete control of your phone network configuration.

My school phone comes as a fully featured system with administrative features that make it easy to manage and monitor your usage, performance and costs.

Homeworking Phone System

The My School Phone remote phone feature, lets school staff make, answer and transfer incoming calls from any location or any mobile phone.

This service can be “bolted” on to your existing phone service, enabling staff to answer calls at home or on any personal mobile device. The remote phone feature works with or without internet access. Where internet access is not available, a mobile phone app is downloadable to Apple or Android devices, enabling staff to answer school calls on their own devices, and then as with any phone system, transfer the call, or ask the caller to leave a voicemail message. Mobile phones are NOT charged for calls made or received on personal mobile devices when using the My School Phone mobile app.

Monthly contracts available on Remote Phone Systems during Coronavirus lockdown.
